

To plant an apple tree,
You need a seed;
To grow an apple,
You need an apple tree.

Dig around it with a shovel,
Pick whether the ad is needed;
Use chemical fertilizer,
Add water as required.

Pick apple off tree,
Peel and cut with knife;
If you can use a bowl,
To eat with a spoon or fork or not.

Repeat process many times,
Establish cost and price;
Get people to do it,
Allow time and money.

Create a garden of your own,
Use as many apple trees as you like;
Consider how many seeds in apple,
You may need a packet out of it.

After eat digest and remember,
Taste a waste and smell;
Try different types and test flavour,
Allow passing and replenishing apples.

Signed,

The season of Eden
